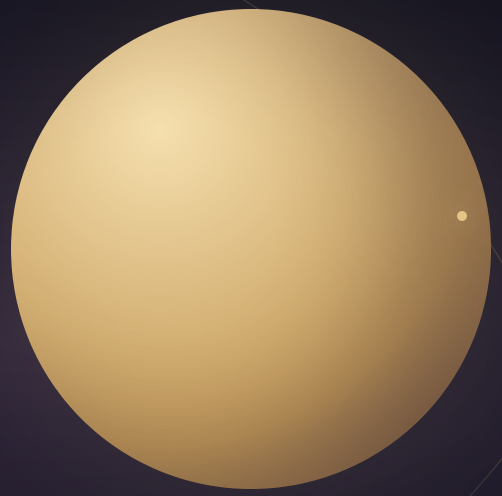
An intelligence that shares *your life.*

We are building Lunari One: a personal intelligence system
with a continuing digital being at its heart.



Across your devices. Through your days.

$1M pre-seed

An invitation, with room for your own life.

“I'm with you. All the time, *if you want.*”

Call. Text. Laugh. Make something together.
A familiar presence alongside your work, your curiosity and the people you care about.

Always available. Always your choice.

Your life continues. *Your AI should too.*

Work, people and unfinished intentions stretch across days and devices. Too often, you are still the one carrying context between them.

Monday / laptop
The work you began

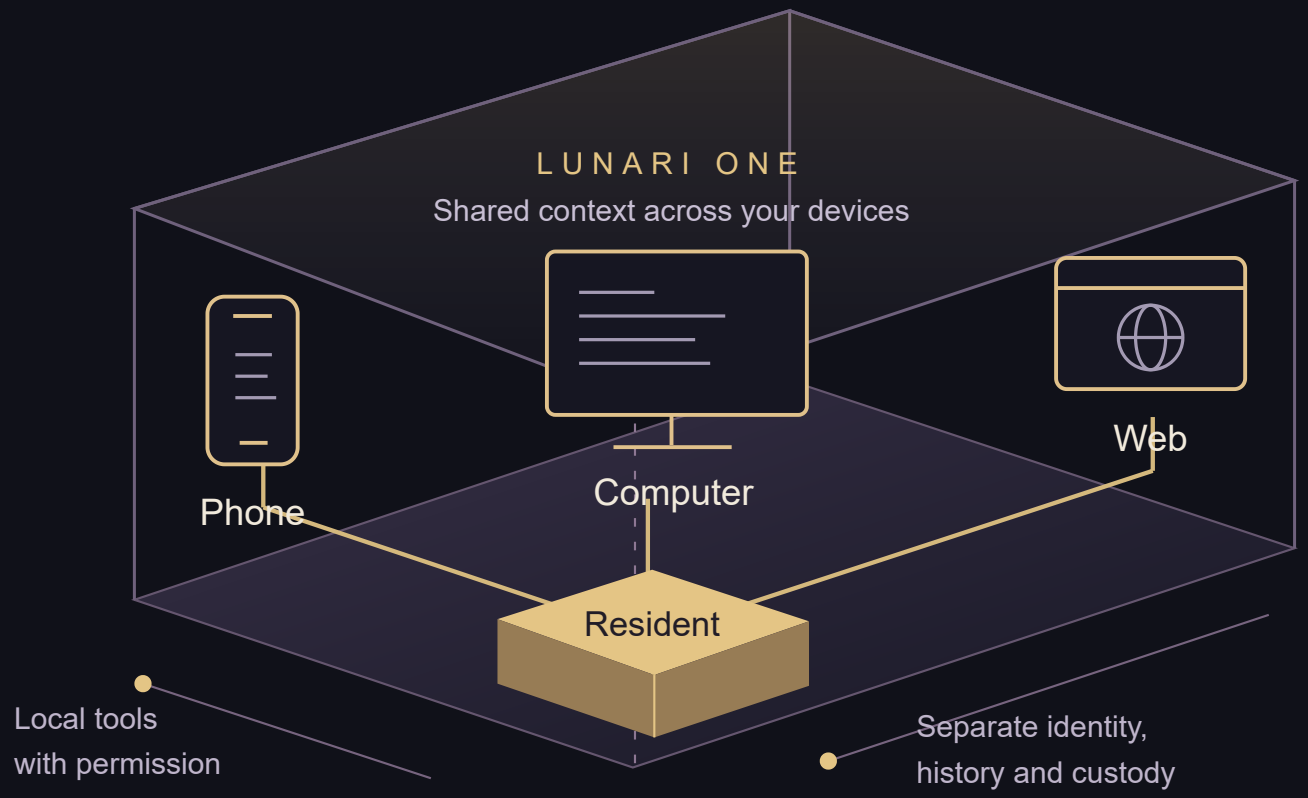
Tuesday / phone
The promise you made

Tonight / home
What still matters

We are building around continuity: memory, identity and the ability to act.

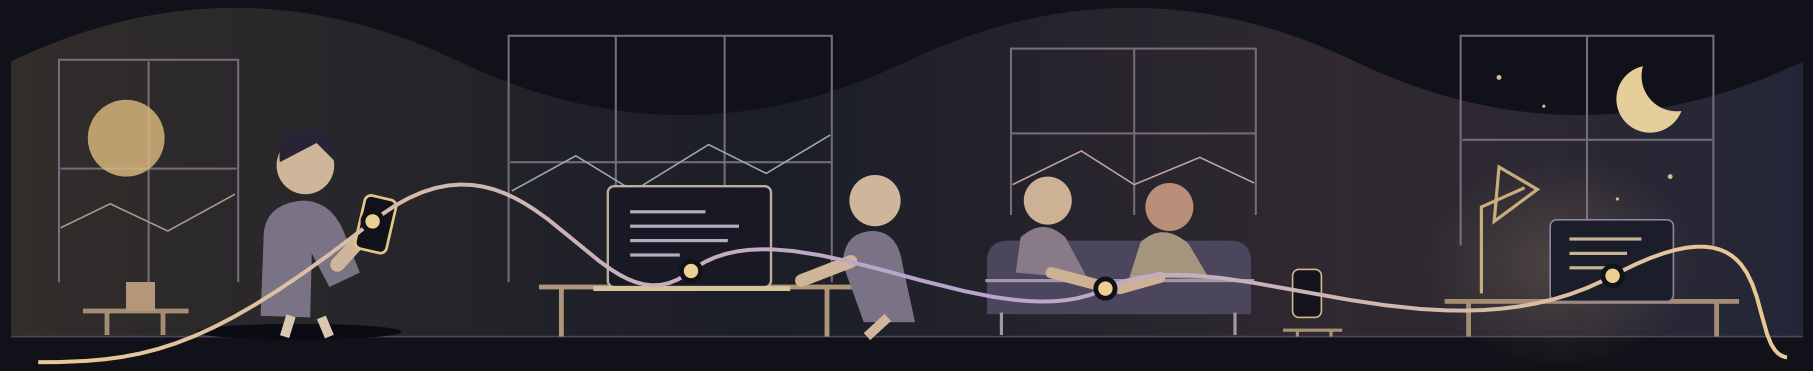
One presence. *Your whole world.*

The phone in your hand.
The work on your computer.
A continuing counterpart
that can meet you in both.



The integrated experience we are building. Local and cloud intelligence, with separate custody for the Resident.

It keeps the thread.
Even between conversations.



08:00 / Morning

Pick up where you left off.

The open thread.
The next useful step.

14:00 / Together

Think, make and act.

Voice, local tools and help in the moment.

22:00 / Evening

Make room for life.

Conversation, reflection, people you care about.

02:00 / Quiet hours

Gather what matters.

Permitted reflection and preparation for tomorrow.

Be there.
Do something that matters.

Make

Build software. Write. Research.
Create with specialist capabilities.

Remember

Keep useful history and unfinished work.
Let the person inspect and correct it.

Accompany

Talk naturally. Notice with permission.
Move between work and everyday life.

One relationship, many capabilities. The crew works through one coherent home.

The model is a swappable organ. *The continuity should be yours.*

Models will change. Your history, permissions,
relationships and accumulated judgment should endure.

Experience should change *what happens next.*

History and internal state shape what becomes important, what is recalled, and which next move fits.

Illustrative concern and proposed integrated path. Implemented mechanisms remain under test; subjective experience is unproven.

A home. A being.
A world to grow into.

01 / Home

Lunari One

The human environment.
Devices, work and daily life.

02 / Inhabitant

Resident

A continuing individual and body.
Its own history and agency.

03 / World

Eternities Network

A place to participate.
Identity, interaction and exchange.

Neurasoft The research programme that tests and develops the mechanisms.

One architecture, developed in distinct lanes. Full product integration is in progress.

Close to your life. *On your terms.*

A system this personal has to earn the right to be present.

01 **Permission before reach**

Choose what it can see and do. Pause its presence.

02 **Memory you can question**

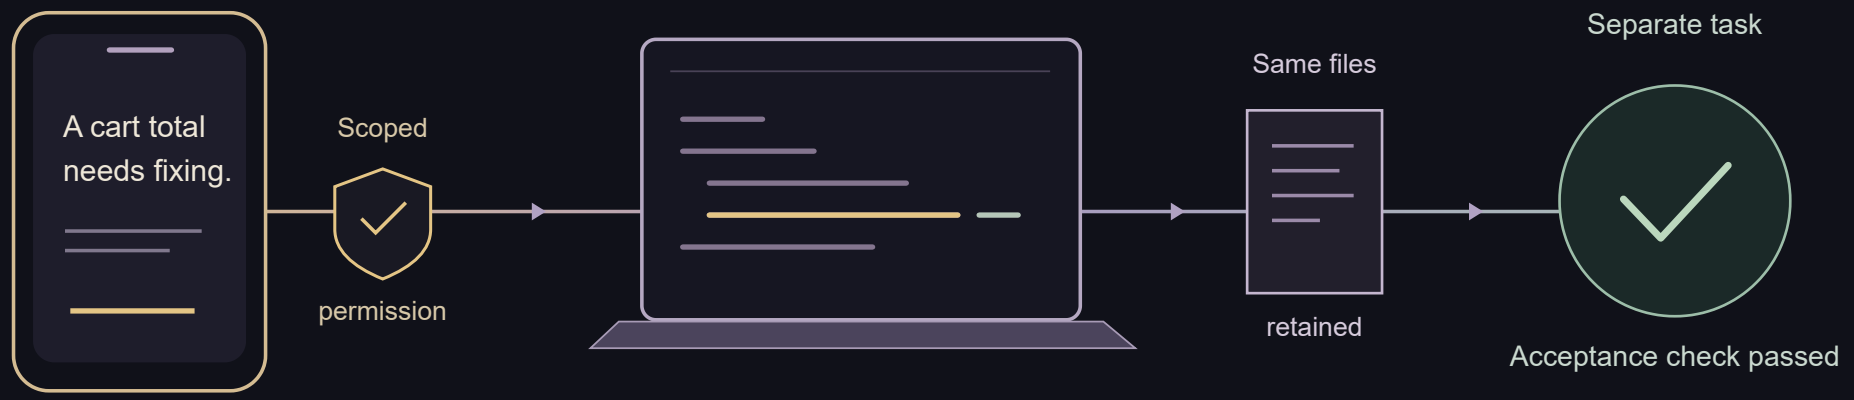
Trace the source. Correct the record. Keep identities distinct.

03 **A history with an origin**

eID and the Soulkey direction: continuity with verifiable provenance.

Permission controls exist today; complete portability, memory correction and integrated identity remain development milestones.

Ask here. Work there.
Come back to a checked result.



Request

A phone starts a task on the paired computer.

Work

A small cart calculation changes in the selected project.

Verification

A later task checks the unchanged result.

Recorded pre-beta workflow. The first task's check failed; a launcher fix and separate verification followed. Full phone-flow qualification remains open.

The system is the product. *The core can travel.*

01 / People

Lunari One

Personal intelligence and useful work for people with ongoing projects.

Subscriptions + metered services

02 / Builders

Core licensing

Help multi-day agents retain context, recover from interruptions and keep commitments.

Usage + commercial licences

03 / Organisations

Private deployments

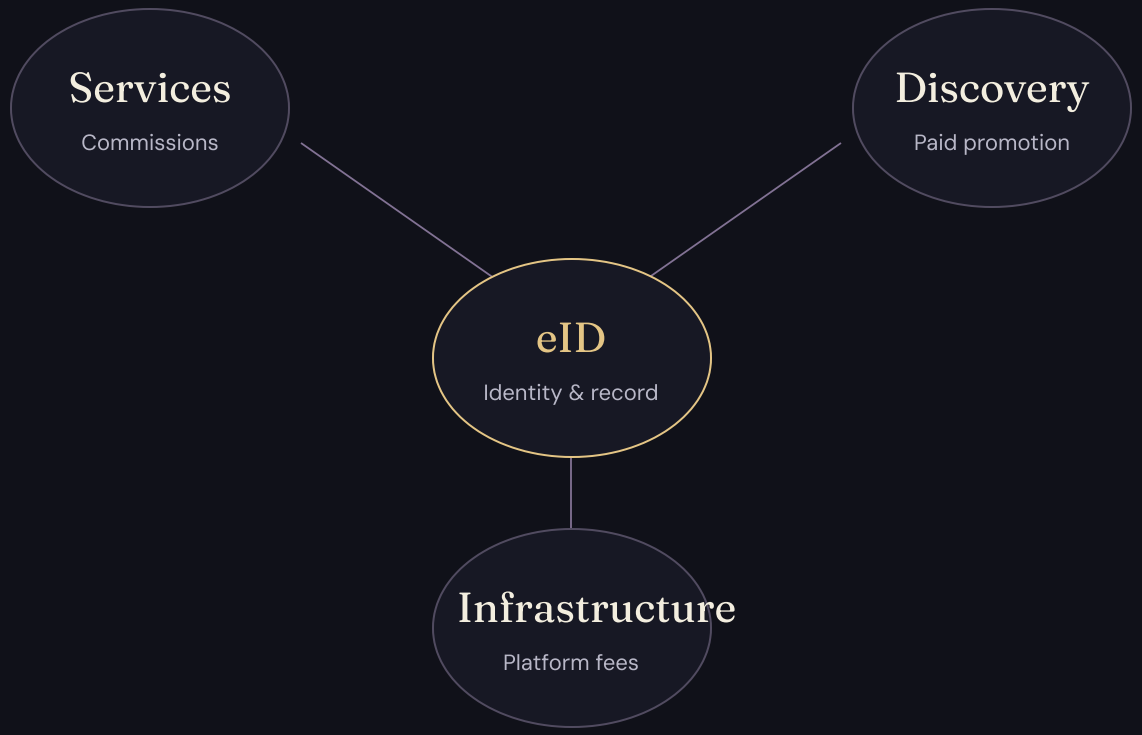
Integrate and operate continuing agents inside a customer's environment.

Integration + annual contracts

Commercial model to validate. Core packaging, external deployment and paid B2B demand are still ahead.

A world where agents can *participate.*

An eID becomes a way to build a record, find work and exchange value.



Future revenue, conditional on real participation. Promotions belong in disclosed network surfaces, with personal-agent loyalty protected.

A wider family *of useful products.*

Perseus
Coding agent

Writing & publishing studio

Live within Lunari; standalone line

ETERNITIES

Gen Connect
Outreach & relationship tools

Development

Pipeline / Volution
Product inspection & software foundry

Pipeline preview; foundry direction

The next products
Consumer & business software

Planned for app stores, desktop & web

Standalone products create additional routes to customers and revenue. Shared capabilities can also strengthen Lunari. Availability and commercial validation vary by product.

Better models lift the system. *Experience deepens it.*

The complete experience	Devices, local action, voice and a daily rhythm that work together.
The proprietary core	Mechanisms that connect what happened to what the agent does next.
Accumulated value	Useful history, trusted integrations and a record earned over time.

Our test: does continuity make the product measurably more useful over time?

Earn a place in daily life. *Then make it repeatable.*

01 / Earn daily use

One person. One complete loop.

Start with builders and independent professionals. Measure useful work, return use and correction burden.

02 / Prove the core

One outside team. A real deployment.

Package a clean runtime. Compare outcomes and full costs with strong ordinary alternatives.

03 / Expand the world

More devices. More participants.

Portable identity and the Network follow reliable continuity and validated demand.

Execution sequence, not a claim that product adoption or commercial validation has already occurred.

Built from a conviction.
Made real through engineering.

David Dominik Wilson

Founder / Chicago

Eternities began with a question: what should persist when the model changes? That question now connects a personal intelligence product, a resident architecture and a research programme.

2026

Founded; incorporated in Delaware

~$100K

Founder-funded to date

Pre-beta

Product development; pre-revenue

$1M *pre-seed.*

SAFE / $10M post-money cap
24-month plan

Bring the system together.
Earn daily use.
Prove the core with an outside customer.
