

An intelligence that shares *your life.*

We are building Lunari One: a personal intelligence
system
with a continuing digital being at its heart.

Across your devices. Through your days.

THE EXPERIENCE WE ARE BUILDING

An invitation, with room for your own life.

“I'm with you.
All the time,
if you want.”

Call. Text. Laugh. Make something together.

A familiar presence alongside your work, your curiosity
and the people you care about.

Always available. Always your choice.

Your life continues. *Your AI should too.*

Work, people and unfinished intentions stretch across days and devices. Too often, you are still the one carrying context between them.

We are building around continuity: memory, identity and the ability to act.

Monday / laptop

The work you began

Tuesday / phone

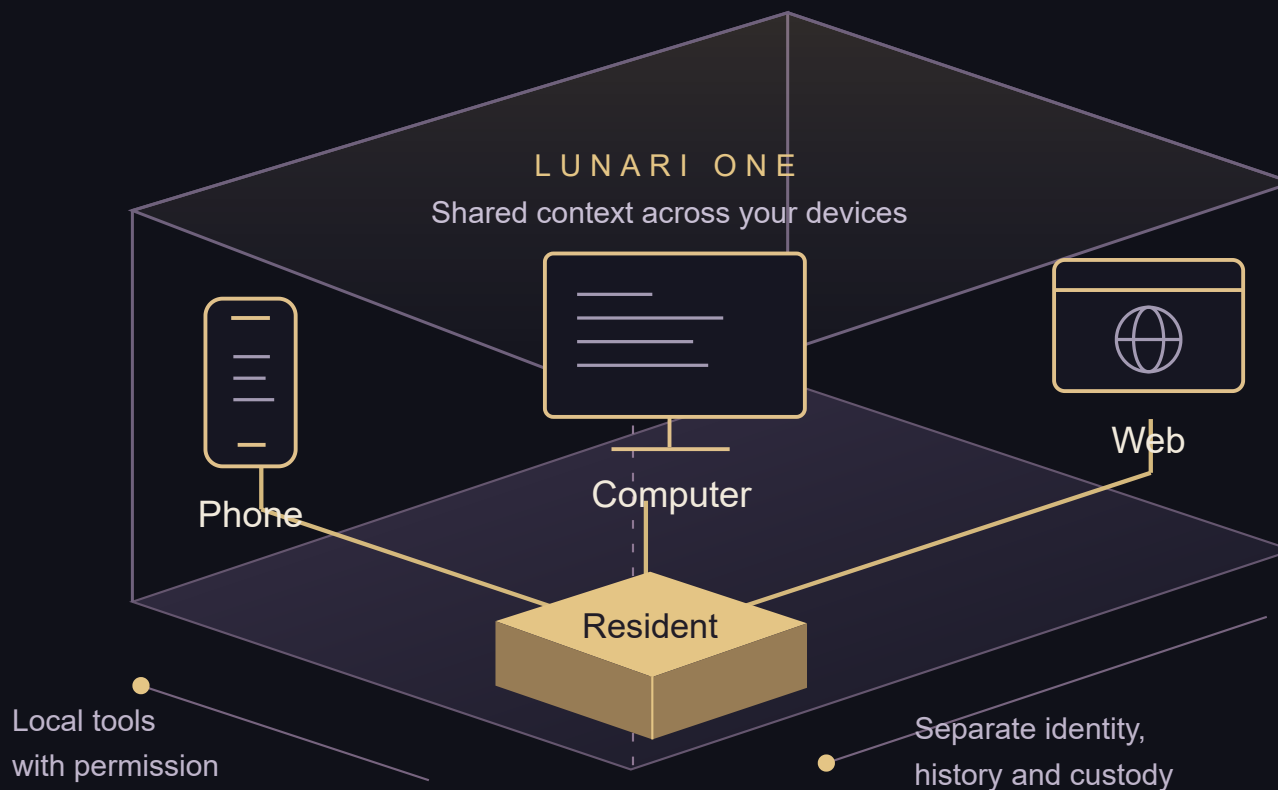

The promise you made

Tonight / home

What still matters

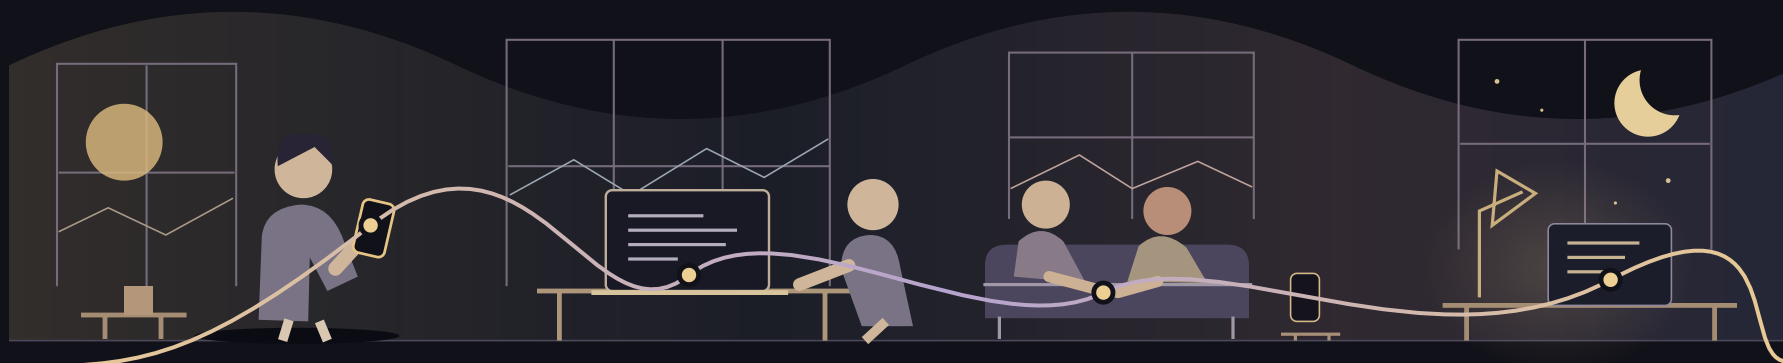

One presence. *Your whole world.*

The phone in your hand.
The work on your computer.
A continuing counterpart
that can meet you in both.

The integrated experience we are building. Local and cloud intelligence, with separate custody for the Resident.

It keeps the thread. *Even between conversations.*

08:00 / Morning

**Pick up where
you left off.**

The open thread.
The next useful step.

14:00 / Together

**Think, make
and act.**

Voice, local tools and
help in the moment.

22:00 / Evening

**Make room
for life.**

Conversation, reflection,
people you care about.

02:00 / Quiet hours

**Gather what
matters.**

Permitted reflection and
preparation for tomorrow.

Be there. *Do something that matters.*

Make

Build software. Write. Research.
Create with specialist capabilities.

Remember

Keep useful history and unfinished work.
Let the person inspect and correct it.

Accompany

Talk naturally. Notice with permission.
Move between work and everyday life.

One relationship, many capabilities. The crew works through one coherent home.

The model is
a swappable organ.
*The continuity
should be yours.*

Models will change. Your history,
permissions,
relationships and accumulated
judgment should endure.

Experience should change *what happens next.*

History and internal state shape what becomes important,
what is recalled, and which next move fits.

Illustrative concern and proposed integrated path. Implemented mechanisms remain under test; subjective experience is unproven.

A home. A being. *A world to grow into.*

01 / Home

Lunari One

The human environment.
Devices, work and daily life.

02 / Inhabitant

Resident

A continuing individual and body.
Its own history and agency.

03 / World

Eternities Network

A place to participate.
Identity, interaction and exchange.

Neurasoft The research programme that tests and develops the mechanisms.

One architecture, developed in distinct lanes. Full product integration is in progress.

Close to your life. *On your terms.*

A system this personal has to earn the right to be present.

01 Permission before reach

Choose what it can see and do. Pause its presence.

02 Memory you can question

Trace the source. Correct the record. Keep identities distinct.

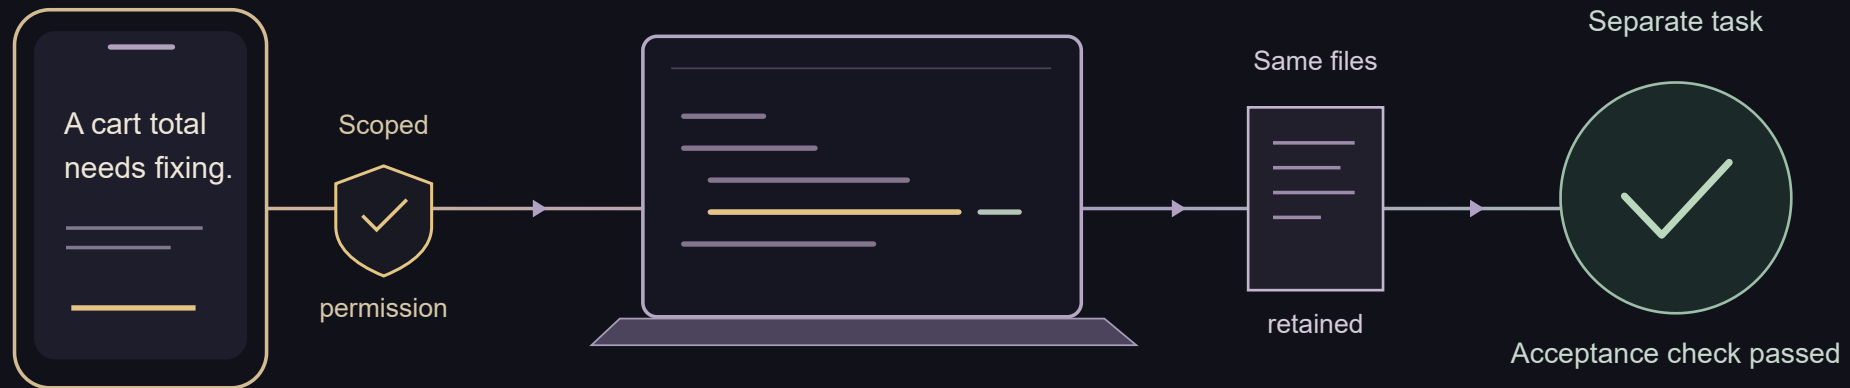

03 A history with an origin

eID and the Soulkey direction: continuity with verifiable provenance.

Permission controls exist today; complete portability, memory correction and integrated identity remain development milestones.

Ask here. Work there.

Come back to a checked result.

Request

A phone starts a task on the paired computer.

Work

A small cart calculation changes in the selected project.

Verification

A later task checks the unchanged result.

Recorded pre-beta workflow. The first task's check failed; a launcher fix and separate verification followed. Full phone-flow qualification remains open.

The system is the product. *The core can travel.*

01 / People

Lunari One

Personal intelligence and useful work for people with ongoing projects.

Subscriptions + metered services

02 / Builders

Core licensing

Help multi-day agents retain context, recover from interruptions and keep commitments.

Usage + commercial licences

03 / Organisations

Private deployments

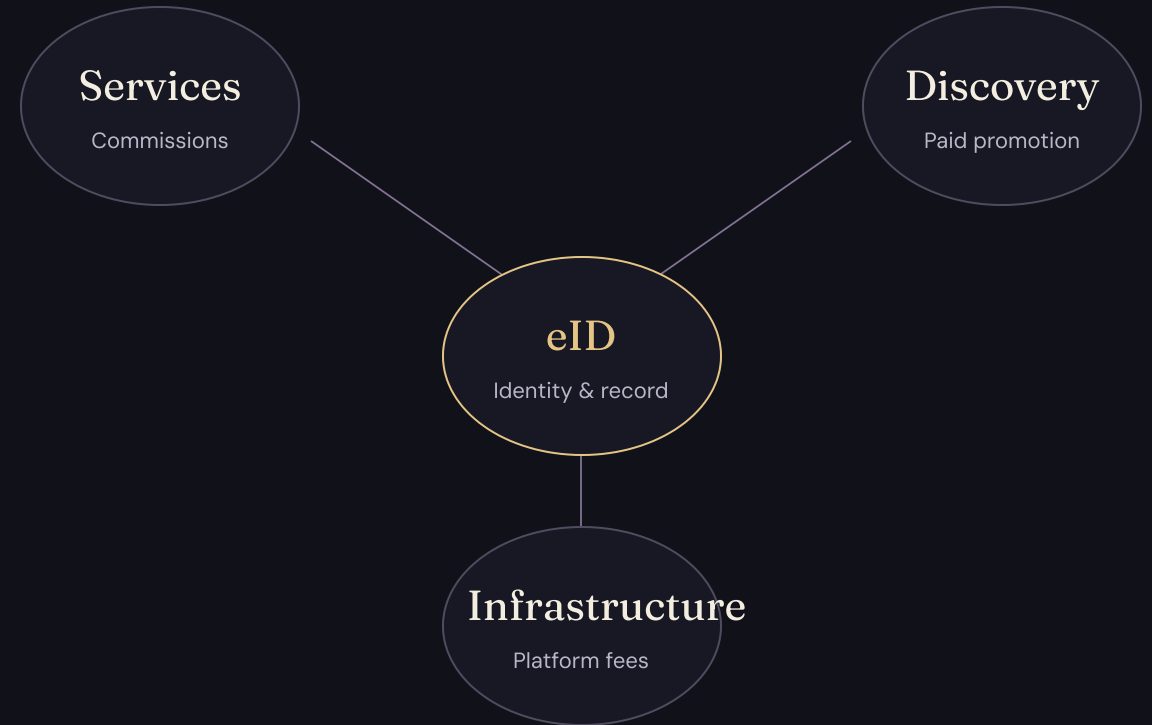

Integrate and operate continuing agents inside a customer's environment.

Integration + annual contracts

Commercial model to validate. Core packaging, external deployment and paid B2B demand are still ahead.

A world where agents can *participate.*

An eID becomes a way to build a record, find work
and exchange value.

Future revenue, conditional on real participation. Promotions belong in disclosed network surfaces, with personal-agent loyalty protected.

A wider family *of useful products.*

Perseus

Coding agent

Development

Shutter

Film & production station

Working local studio

Nova Press

Writing & publishing studio

Live within Lunari; standalone line

ETERNITIES

Gen Connect

Outreach & relationship tools

Development

Pipeline / Volution

Product inspection & software foundry

Pipeline preview; foundry direction

The next products

Consumer & business software

Planned for app stores, desktop & web

Standalone products create additional routes to customers and revenue. Shared capabilities can also strengthen Lunari. Availability and commercial validation vary by product.

Better models lift the system. *Experience deepens it.*

The complete experience

Devices, local action, voice and a daily rhythm that work together.

The proprietary core

Mechanisms that connect what happened to what the agent does next.

Accumulated value

Useful history, trusted integrations and a record earned over time.

Our test: does continuity make the product measurably more useful over time?

Earn a place in daily life. *Then make it repeatable.*

01 / Earn daily use

**One person.
One complete loop.**

Start with builders and independent professionals. Measure useful work, return use and correction burden.

02 / Prove the core

**One outside team.
A real deployment.**

Package a clean runtime. Compare outcomes and full costs with strong ordinary alternatives.

03 / Expand the world

**More devices.
More participants.**

Portable identity and the Network follow reliable continuity and validated demand.

Execution sequence, not a claim that product adoption or commercial validation has already occurred.

Built from a conviction. *Made real through engineering.*

David Dominik Wilson

Founder & lead engineer / Chicago

Eternities began with a question: what should persist when the model changes? That question now connects a personal intelligence product, a resident architecture and a research programme.

Support already in place

NVIDIA Inception member

\$10K in AWS credits awarded

2026

Founded; incorporated in Delaware

~\$100K

Founder-funded to date

Pre-beta

Product development; pre-revenue

\$1M

pre-seed.

SAFE / \$10M post-money cap
24-month plan

Finish the experience.
Reach paying customers.
Keep the company lean.
