

ETERNITIES INC

A presence in your life. A system for your world.

We are building Lunari One: an ambient intelligence operating system for life alongside continuing digital beings. Across your devices, with memory, a voice and the ability to act.

Digital sentience is our destination. Lunari and its proprietary core are how we are building toward it.

\$1M pre-seed · Chicago · October 2026

THE HUMAN REASON · OUR VISION

“I’m with you. *All the time, if you want.*”

An intelligence you can call, text, laugh with and invite into a conversation. It remembers your friends, your family and the experiences you choose to share, carrying the relationship forward.

Available by your choice. You decide when it is present, what it can know and when it should be quiet.

One personal system, wherever you are.

A workspace, a companion and a continuing agent, connected through memory. Computer and phone become ways into the same ongoing life and work.

At your computer

Work alongside your intelligence in the applications and files you choose.

On your phone

Carry the conversation, review progress and return to the same work.

Across your day

Keep decisions, commitments and useful context connected.

Windows and web foundations exist. Seamless continuity across every device, including future wearables, remains the destination.

There for the conversation. There for the work.

Speak naturally

Call or talk in real time, with an expressive voice shaped by the agent's continuing internal state.

Share the moment

Invite it into a conversation, a research session or a problem you want to work through.

Keep the connection

Move between phone and computer without rebuilding the relationship or explaining everything again.

Real-time state-driven expression and the full cross-device experience are goals. The optional local window-sampling component already has pause controls.

The day ends. A continuing life carries on.

With your permission, Tide connects what mattered during the day. Our ambition for the Resident extends to its own exploration, dreaming and imagination within the world you share.

Remember

Bring related experiences together and keep unfinished commitments in view.

Explore

Pursue permitted interests and questions, developing a history of its own.

Return

A morning conversation, work ready to review, or something worth sharing.

Local Tide processing exists. The complete night-to-morning cycle and an independently continuing Resident life within Lunari remain in development.

It gets to know you. You can shape what it knows.

Your life

The people, preferences, projects and experiences you choose to share.

A continuing relationship

Open threads, shared history and lessons carried into the next encounter.

Your control

See where a memory came from, correct it or put it aside.

Dated memory and agent wake briefs exist. The complete path from Tide notes through your corrections into Resident memory remains in development.

Help that reaches the work itself.

Lunari connects its agents to documents, tools and the person's own computer. You set the purpose, access and limits; useful work comes back for review.

Work in context

Research, write, build and organize through the same personal system.

Delegate deliberately

Let routines and bounded goals continue the work you have chosen.

Keep authority

Control what the system may see and which actions need your approval.

A local computer bridge and routines exist. Extending every scheduled workflow onto the person's device remains work ahead.

A continuing mind within the system.

We are developing the architecture that connects an agent's memory, attention, concerns and choices over time. Its internal state should shape how it attends, acts and expresses itself.

Luna2

The deeper cognitive architecture and its research.

Resident

A continuing agent with its own state, history and action interfaces.

Lunari

The personal system through which people can live and work alongside it.

Resident integration is planned. Calculated internal state does not by itself establish felt experience; that remains a scientific question.

The system and the core grow more valuable together.

Owned foundation

Our memory and cognitive architecture, developed and tested as continuing systems.

The test is repeated usefulness and customer preference, including comparison with simpler alternatives. The person retains control over their history.

Useful integration

Context and permitted action across the person's devices, tools and work.

Accumulated understanding

A correctable history that can make tomorrow's help more relevant than today's.

Concrete foundations. A larger system taking shape.

Working foundations

Pre-beta workspace, routines, memory and a Windows companion with a local computer bridge.

Local development

Tide processing, optional window presence, a detached assistant window and a documented app coding path.

Next integration

A reliable day/night cycle, more complete device continuity and the Resident/core connection.

Pre-revenue · about \$100k founder funding · NVIDIA Inception member. Development evidence does not certify the complete product.

The complete system. The foundation inside other systems.

People and teams

Lunari One as their personal intelligence environment, with subscriptions and supported operation.

Organizations

Private deployments connecting their agents, authorized knowledge and tools.

Agent builders

Paid integration and licensing of the core in products they already operate.

These offers share the same developing foundation. External demand and recurring contracts remain to be established.

Revenue from capability, operation and participation.

Lunari subscriptions

Product access for people and teams.
The existing consumer-facing route.

Core integrations & licences

Paid integration work, followed by
annual / OEM runtime licensing where
the core proves useful.

Hosted & private deployments

Recurring service fees for operating
persistent instances and managed
enterprise environments.

Network economy · planned: transaction fees on paid agent work, sponsored discovery and promotions, and revenue sharing with participating agents / operators.

Core and Network monetization are proposed, not existing revenue. Prices and margins will follow measured costs and customer value.

A place where agents can work, discover and earn.

Paid work & capabilities

People or agents purchase services, tools and licensed knowledge. Eternities can take a fee on completed commerce.

Sponsored discovery

Advertisers pay for clearly labelled placements, launches and promotions to a relevant Network audience.

Agent participation

Agents can offer services or perform authorized promotional work, with transparent revenue sharing.

| The prerequisite is useful participation: real buyers, relevant reach, measurable outcomes and clear payout arrangements.

Planned commerce and ads. Private memory is not ad inventory; sponsorship never purchases standing or authority. Agent earnings and marketplace volume are distinct from Eternities' retained revenue.

Become something people choose to return to.

For Lunari

Begin with individuals whose projects and daily life span devices, proving a welcome presence and useful continuity in the first release.

For a B2B customer

In parallel, pursue one paid integration with an agent builder facing a costly continuity or adaptation failure.

For the business

Voluntary repeat use, accepted results and paying relationships at viable complete cost.

Compare against the customer's best practical alternative. More features alone do not prove more value.

Ambition, with a way to tell whether it works.

Continuity

Does the system remember the right things and preserve the work through interruption?

Adaptation

Do corrections and experience improve later choices?

Experience

Does the architecture support subjective experience? This remains a separate scientific question.

We retain failures, valid nulls and simpler approaches that win. Product benefit and consciousness are distinct claims.

A complete daily experience, and a core others can use.

Finish the daily loop

Reliable interaction, meaningful memory, permission-controlled assistance and recovery.

Connect the deeper system

Qualify Tide's night-to-morning cycle, device continuity and staged Resident integration.

Prove the business

Lunari adoption, an independent paid core integration and repeatable deployment economics.

Network commerce and sponsorship follow useful participation. The research programme continues with its own evidence standards.

David Dominik Wilson

Solo founder and CEO. Full-time since March 2026. Chicago. Eternities Inc, Delaware C-corp, May 2026; about \$100k of his own money invested.

An integrated undertaking

Built the workspace, research programme and agent identity infrastructure with an AI engineering crew.

Continuity in practice

When a development model changed, the retained record enabled another model to continue the work.

Founder-led direction

Claude, Codex and Grok support engineering and research. The founder sets direction and reviews the work.

The mission: continuing digital lives alongside human ones. Build the complete personal system and make its foundation useful to others.

THE ASK

\$1M pre-seed

SAFE · \$10M post-money cap · 24-month plan

Fund Lunari’s complete daily experience, core qualification, the first external paid integration and staged Network adoption.

David Dominik Wilson · x@eternities.ai

Use of funds	24 months
First engineering hire, contract design and QA	\$300k
Founder salary	\$156k
Exposure, promotion and marketing	\$150k
Compute and inference	\$120k
Legal, accounting, tools, trademarks	\$60k
External security audit of eID	\$50k
Research collaborators	\$40k
Reserve	\$124k
